The Expanded Public Works Programme's (EPWP) Contractor Development Programme (CDP)

What is EPWP Contractor Development Programme?

This programme falls under the Department of Transport and Public Works' EPWP and was designed to support emerging contractors in the Western Cape.

What does it do?

The objective of contractor development is to implement structured programmes that facilitate the potential development of emerging enterprises within the construction industry through skills and business enhancement initiatives. This will enable them to

compete effectively and independently in the open market beyond state intervention.

How is the programme structured?

The programme consists of two main projects:

1. CDP Foundation Training

- **10 months training** for CIDB Level 1-2 GB/CE contractors.
- **Road Infrastructure Projects** – training geared

towards the development and upskilling of contractors on provincial Public Works/Roads Projects.

- **Five-week training programme** – offered to municipalities who have emerging contractors on their databases that need training and development in the management of a construction business and in preparation for future municipal projects.
- **Rural Development Programme** – focuses on the rural nodes as per the National Comprehensive Rural Development Programme (NCRDP). The approach is the same as the five-week programme.
- **Two-day Construction Information Sessions (CIS)** offered to all contractors to assist them with compliance.
 - CIS offers assistance in SARS registration information; central data registration; BB-BEE information and registration; supply chain management tender processes and compliance; construction industry development board (CIDB) registration; bargaining business council (BBC); and costing guidelines for labour intensive projects.

2. CDP Advanced Training and Mentoring

- Assistance offered to CIDB Levels 3-5 GB/CE contractors. The programme assists with:
 - Pre-tendering (guidance with completion of tenders).
 - Professional mentoring and guidance on and off the construction site.
 - Enterprise development (guidance with business administration and management).
- Five-day training sessions included in the programme:
 - Labour intensive training.
 - Surveying techniques.
 - Construction management.
