BITOU MUNICIPALITY - NERSA APPROVED TARIFFS FOR : 2024 - 2025, 2025 - 2026, 2026 - 2027 FINANCIAL YEARS

	Electricity Tariffs	Current Tariffs: 2023 - 2024	Budget Year: 2024 2025	% Increase/ (Decrease)	Budget Year + 1: 2025 - 2026	% Increase/ (Decrease)	Budget Year + 2: 2026 - 2027	% Increase/ (Decrease)
	<p>Note on Tariff circuit breakers: Due to international standardisation the 30A , 45A and 60 A circuit breakers are becoming unavailable. As a result the new standard circuit breakers will be 32A, 40A and 63A. Thus where reference is made to 30A this will also refer to 32A, and 45A to 40A, and 60A to 63A.</p>							
1.1	<p>Domestic Consumer Tariffs</p> <p>This tariff covers the supply of electricity for domestic use in private dwellings, flats and chalets including accommodation establishments with three or less bedrooms, with separate meters and includes churches, welfare buildings, registered schools, crèches, hospitals, halls, sport clubs or similar premises with circuit breaker sizes not in excess of 60Amp single phase or 60Amp three phase. Should Consumers require supplies in excess hereof, the Commercial Consumer or Bulk Supply tariff will be applicable.</p> <p>(a) Second dwellings: Applications for electrification of second dwelling will be subject to the following; Owner of property must give permission in writing. The owners' supply will be split in such a way that non of the properties will have a supply of less than 20A. The tenant must employ an electrician to do the cabling from the nearest kiosk to the municipality's approval and provide a Certificate of Compliance for the house wiring, The tenant must get a quotation from the municipality for the meter installation. If there is no capacity to split the supply as indicated, the tenant must do a grid study to determine capacity for a connection.</p> <p>(b)</p>							
1.1.1	<p>Prepaid Meters</p> <p>The practical implementation of the Inclining Block Tariffs (IBT) for prepaid meters is based on the number of units purchased during a calendar month. Any purchases made during the calendar month will be calculated by the vending system in accordance with the IBT rates. If the consumer purchases more than once in a month, the previous purchases will be taken into account when the rate for the additional units is determined. Due to the inclining rates, it will not be beneficial for a consumer to purchase much more than the required monthly consumption. At the end of the month, the system resets and the first purchases in the next month is at the Block 1 rate. If a consumer does not purchase any units in a full calendar month/s, this will not affect the rates of the next purchase in a calendar month thereafter. Consumers will be responsible for all costs relating to the conversion from conventional to prepayment metering.</p> <p>(a) Customers residing in sub-economic areas receive the first 50kWh purchased per month for free. The 50kWh allocation is not covered by the equitable share. Customers residing in sub-economic areas and are registered as indigents with their names appearing on the indigent register do not pay a basic charge monthly. These indigent customers are on a one-part tariff (prepaid meters) using average of less than 350kWh per month based on an average usage over 4 months. Customers simply residing in sub-economic areas are not be exempt from paying a monthly basic charge and are liable for paying for any energy consumption over the monthly 50kWh allocation and the tariff groups respective monthly basic charge.</p> <p>(b)</p>

1.2	Conventional meters							
(a)	For the purposes of the implementation of the IBT for the conventional meters, the billing period on which the IBT charges will be applied, means the period between successive monthly meter readings (normally between 25 and 36 days), irrespective of whether such readings are taken on the last day of the calendar month. Estimated charges are raised during months during which no meter readings can be taken, which is normally based on the previous month's consumption.							
(b)	Customers residing in sub-economic areas receive the first 50kWh purchased per month for free. The 50kWh allocation is covered by a portion of the equitable share. Customers residing in sub-economic areas and are registered as indigents with their names appearing on the indigent register do not pay a basic charge monthly. These indigent customers are on a one-part tariff (prepaid meters) using average of less than 350kWh per month based on an average usage over 4 months. Customers simply residing in sub-economic areas are not be exempt from paying a monthly basic charge and are liable for paying for any energy consumption over the monthly 50kWh allocation and the tariff groups respective monthly basic charge.							
1.2.1	Single Phase							
(a)	The existing consumers with 80A and 100A single phase circuit breaker sizes are being phased-out in line with NERSA's requirements. Their Basic Charge will be increased annually up to eventually the same value as that of a 60A three phase circuit breaker. It will therefore be advantageous for these consumers to either convert a 60A single phase supply or a 30A or 45A three phase supply, if possible.

1.3	Small Scale Embedded Generation							
(a)	SSEG refers in this instance to consumers who wish to fit alternative energy sources (Wind, Solar etc) to supplement their energy consumption and wishes to export excess energy to the grid.. These systems are generally Grid Tied to the municipal network allowing the consumer to draw energy (electricity kWh or Units) from the municipal network when their energy source does not produce enough energy for their use. In the opposite case where their energy source is producing more energy than the consumer is using, there is the option to feed this excess energy back into the municipal network to which the consumer would receive credit.							
(b)	All consumers must make application to the municipality via the Electrical Engineering Division on the prescribed form or online. The applicant will be required to sign a contract with the municipality to ensure all conditions are met. Additional cost might apply for the upgrading of infrastructure based on the normal conditions of upgrading of a supply							
(c)	The consumer must change to the tariff structure below. It must be noted that this tariff will only be available when council approves it SSEG							
(d)	The consumer must fit a "bi-directional" electricity meter with a modem to the municipalities specification to enable the billing to be properly applied, which will be read remotely.							
(e)	The consumer will have to maintain a net consumer of energy in the year as no cash will be paid to the consumer							
(f)	Potential customers must comply to the prescripts of the latest Bitou "Requirements for Embedded Generation" document.							
(g)	Only for customers with a plant rated under 1MW							
(h)	A sign must be placed outside the property to indicate that the premises generates electricity

(a)	This tariff is for shops, office buildings, hotels, including accommodation establishments with four or more bedrooms, single residential properties utilised for business purposes, clubs (excl. sport clubs), industrial undertakings, temporary supplies, or similar premises with circuit breaker sizes not in excess of 60Amp single phase or 100Amp three phase. Should Consumers have supplies in excess hereof, the Bulk Supply tariff will be applicable.

3.0	Bulk Supply Tariffs							
	The Bulk Supply tariff is for Consumers with a notified maximum demand of 60kVA or more or who require a supply greater than a 100Amp three phase circuit breaker size. The Notified Maximum Demand (NMD) is the maximum demand notified in writing by the Consumer and accepted by the Municipality.							
(a)	Customers who exceeds their notified maximum demand (NMD) will be penalised. This will be based on the actual maximum demand measured in kVA during the billing month, which therefore changes on a monthly basis depending on the customer's actual usage.							
(b)	Consumers will be exempt or any two events that are within 5% of the NMD in a year.							
(c)								
(d)	On the third event, where the NMD is exceeded by 5% or for any one event where the NMD is exceeded by greater than 5%, an additional demand charge will be levied that is equal to "Highest Amount exceeded x R/kVA(network demand charge) x event number" and the notified demand will be restated to the highest demand recorded by the customer. This might require a change to the circuit breaker and metering infrastructure which will be for the customers account.							
3.1	Normal Bulk							
	The Network Demand Charge is payable per month for the demand supplied (maximum demand reading). The Network Access Charge is payable per month based on the highest of either the notified maximum demand (min. 60kVA) or the highest maximum demand reading during the previous 12 months.

3.2	Time of Use (TOU) The TOU tariff is available for Consumers with a minimum notified demand of 60kVA or who require a supply greater than 100A three phase circuit breaker size, and who are able to manage their energy consumption according to Eskom's specified time schedule, i.e. Peak, Standard and Off-Peak for the "Megaflex" tariff. The TOU tariff will only be available to residential developments with a bulk supply after 60% of the erven inside the development have been built on and occupation of the houses have been taken. This tariff is based on the Eskom "Megaflex" tariff, except that there is a single Basic Charge and Eskom's various kWh charges are included in one Energy Charge. The Network Demand Charge is payable per month for the demand supplied (maximum demand reading) during peak and standard periods. No Network Demand Charge is payable during off-peak periods. The Network Access Charge is payable per month based on the highest of either the notified maximum demand (min. 60kVA) or the highest maximum demand reading during the previous 12 months. The charge is applicable during all time periods. The Reactive Energy Charge is applied to kVAh in excess of 30% (0,96 Power Factor) of kWh recorded during peak and standard periods. The excess reactive energy is determined per 30 minute integrating period and accumulated for the month and will only be applicable during high-demand season. The difference between the Low and High Voltage charges is 5% and in line with Eskom tariffs. The following conditions are applicable to the TOU tariff: (i) Consumers with a minimum notified demand of 60kVa, and who are able to manage their energy consumption according to Eskom's specified time schedule, i.e. Peak, Standard and Off-Peak, for "Megaflex" tariff. (ii) Consumers must have the necessary electronic metering equipment installed and correctly programmed for this tariff at their cost. (iii) Where existing Consumers consider conversion to TOU, it will be the consumers' responsibility to do a tariff study. (iv) At least 6 months TOU data (3 x high demand season and 3 x low demand season) must be available before the conversion can be implemented. (v) A change of tariff will apply for a minimum period of 12 months with three months mutual notice thereafter. (a)
